3 **TGA Reform and Why You Should Care About It.**

4 Author: Amy Vaux, Bachelor of Medicine and Surgery Honours, fourth year 2018,
5 Monash University.

6 Amy Vaux is a fourth-year medical student from Monash University. Following an
7 interest in health advocacy and public health she participated in a Summer Research
8 Scholarship with the Monash School of Public and Preventative Health under the
9 supervision of Associate Professor Ken Harvey.

10

11 Summary: the bill to amend the Therapeutic Goods Act was referred to the Senate for
12 enquiry in late 2017, and since has been passed with further amendments. The bill
13 triggered outcry by stakeholders who voiced concern that some of the proposed
14 amendments may make the already widely criticised system, even worse.

CORRECTED PROOF

1 **TGA reform and why you should care about it**
2 *How potentially dodgy products end up on your pharmacy shelf and how to tell which*
3 *ones to trust.*

4
5 Whilst consumer law hardly seems like a topic to engage doctors and medical
6 students, the changes to the Therapeutic Goods Act have great significance for all
7 healthcare professionals.

8
9 The Therapeutic Goods Act contains the rules and regulations that determine, which
10 pharmaceutical products are sold in Australia, and what health claims they can make.
11 When shopping in a pharmacy, most consumers and patients assume that the products
12 available to them have been assessed for their safety and efficacy, which is not always
13 the case [1,2].

14
15

16
17
18 Compare the 2 products above: Same store, same price, same therapeutic claims.
19
20 Yet only one product has ever had to demonstrate any evidence that it works to end up
21 on your pharmacy shelf with the letter "R", the other end up with a letter "L". One
22 little letter, a lifetime of difference.

23
24 When a product is *registered* with the Therapeutic Goods Administration (TGA), the
25 sponsor must provide high quality evidence to support any claims it makes; however,
26 when a product is *listed* with the TGA, sponsors are only required to *say* that they do
27 hold evidence to support their claims. At no point are they required to produce this
28 evidence; and no part of the process checks that this evidence actually exists [2].

29
30 How do consumers tell the difference between registered and listed products? A tiny
31 "AUST R" label for *registered products* and an "AUST L" for *listed products* is the

1 only indicator on the packet. A survey conducted by CHOICE in 2016 found that 80%
2 of consumers were unaware that products had these codes on the label [4]. Even when
3 the labels were pointed out to consumers, most were unsure of what “AUST R” and
4 “AUST L” meant [4].

5
6 Both registered and listed products represent a substantial component of Australian
7 patients’ healthcare. Consumers spent roughly \$10.8 billion on vitamins, supplements
8 and over-the-counter medications between 2015-2016; more than that spent on dental
9 care and public hospitals combined [5].

10
11 Consumers rely on the TGA to guide their treatment choices, which involves both
12 controlling product availability and package labelling, but as consumers are unaware
13 that these package codes exist, or what the codes mean, they are misled by product
14 claims they believe have been substantiated.

15
16 Consumers need to be adequately educated and informed about the difference
17 between listed and registered products. This sentiment was reflected in the 2015
18 Medicines and Medical Devices Review recommendation that prominent disclaimers
19 should be applied to all advertising material relating to listed complementary
20 medicines and state that the efficacy of the claims made for these products has not
21 been independently assessed [6].

22
23 Additionally, it is also crucial to strengthen the pre-approval system that examines the
24 claims of listed products *before* they are placed on the market. Doing this will limit
25 the exposure of consumers and patients to products with unsubstantiated claims in the
26 first place.

27
28 A bill to amend the Therapeutic Goods Act, the legislation that guides the TGA, was
29 put forward in Parliament in 2017. The bill proposed to scrap the pre-approval system
30 altogether in favour of shifting towards more “self-regulatory models by industry”
31 and rejected calls to require disclaimers on products that have not been critically
32 appraised [7].

33
34 The concern is that this will remove the only, albeit weak, regulatory barrier to
35 publishing erroneous packaging claims. Instead, the system would rely on a post-
36 market surveillance system to discourage bad behaviour. In this system, companies
37 would only be prosecuted after unverifiable claims have been published and
38 purchased, consumers misled and well after the horse has truly bolted.

39
40 With these changes, even greater reliance would be placed on the AUST R/L coding
41 system to inform consumers of the potential merit of product claims; a system which,
42 as discussed, consumers do not understand [5].

43
44 Fortunately, after staunch campaigns from consumer advocate groups such as Choice
45 and The Greens, the bill failed to pass the senate, and was sent to a senate committee
46 for review [8-10].

47
48 After hearing a range of submissions from consumer advocates to industry
49 representatives, the government reached a compromised amendment, extending the
